

# National Vintage Report 2022

## Appendix: Regional Summary Tables

This appendix contains intake summary tables by region and variety. The information includes tonnes purchased, tonnes of own grown fruit and an estimated total value of all grapes. It is important to note that these tables utilise collected (reported) tonnages and therefore tonnes and total value at a state level will differ from figures quoted in the National Vintage Report 2022. For purchased grapes, if a regional/variety combination did not have three or more purchasers, the average value is excluded for the sake of privacy of those respondents.

Only defined GI regions where the total collected tonnage exceeds 1000 tonnes have been included in this report. Information for smaller regions and 'zones - other' can be obtained on request. ### Notes to all tables

1. Where there are fewer than three purchasers of a variety, the average price and total purchase value are not reported.
2. The estimated non-response rate nationally is 9%; however, the non-response rate varies for each region. Generally, regions with more small wineries and less purchased fruit will have higher non-response rates. As the number and identity of respondents can change from year to year, changes in the size of the crush can be partly attributable to changes in the non-response rate.
